FIGHTING FOR THE DRUPAL 'END USER' SINCE 2009

What we'll be covering today:

1. What we mean by “end user”
2. What it means for a system to be “easy to use”
3. Tips for approaching your site build with the end user in mind!

What we mean by “end user”

TL;DR

Definition

In **product development**, an **end user** (sometimes **end-user**)^[a] is a person who ultimately uses or is intended to ultimately use a product.^{[1][2][3]} The end user stands in contrast to users who support or maintain the product^[4], such as **sysops**, **system administrators**, **database administrators**,^[5] or technicians. End users typically do not possess the technical understanding or skill of the product designers,^[6] a fact that it is easy for designers to forget or overlook, leading to features with which the **customer is dissatisfied**.^[2] In **information technology**, end users are not customers in the usual sense--they are typically employees of the customer.^[7] https://en.wikipedia.org/wiki/End_user

**End users are
people too.**

Content Editor
(slightly less technical)

**Content Administrator
or Technical Admin
or Producer**

Final Approver
(more high-level stakeholder)

Community Moderator

to be *easy to use***

III. Web Site Design

RFP

The site will contain the information from the existing site as well as additional information from the city. In the case of Cypress we divided the site along city departments. Internet sites for cities are an excellent opportunity to provide often requested information on the web. Typically a city web site will be divided approximately six major sections with 8 to 10 pages per section.

B. Design Methodology

It is essential to establish a polished and professional look for the City of Villa Park. Mills Group Multimedia will establish a temporary area, out of view from the general public, to post design concepts for client approval. We will begin by creating three versions of the site main page. The system should be easy to use.

A row of books on a wooden shelf. The books are mostly technical, including titles like 'jQuery Cookbook', 'Developing Backbone.js Applications', 'High Performance MySQL', 'PHP WEB SERVICES', 'Single Page Web Applications', 'Node.js IN ACTION', 'USER STORIES APPLIED', 'functional JavaScript', 'UNIX the textbook', 'The Productive Programmer', 'IF HEMINGWAY WROTE JAVASCRIPT', and 'THE DESIGN OF EVERYDAY THINGS'. The text 'Easy to Use ?!' is overlaid on the image.

Easy to Use ?!

5 'easy' ways to approach 'Easy to Use'

- Subjective
- Build Approach
- Technical Implementation

Interview Your Users

1

- Ask them for common tasks
- Watch them work if you can
- Ask about 'offline' workflows
- Deadline & or last minute actions
- Successful requirements gathering is KEY

Successful Requirements Gathering with Jordan Hirsch

Thursday 7.23.2015 at 1:00 - 1:45

Room: Balcony A

‘Help’ Text

2

- Drupal ships with this by default
- Explain the fields & offer tips
- Great for image formats

Removing/Hiding Unnecessary Buttons

3

- Drupal comes with a lot of options by default
- Not all users need access to some of the more advanced configuration options
- Permissions & Roles to achieve flexibility

Our friend the **delete** button

- 'double delete' has it's weak moments
- making it harder to break or do damage
- 'unpublish' as a prompted option

User Guides

4

The screenshot shows a web form titled 'TEAM LIST' with a blue 'show row weights' link in the top right. The form contains the following elements, each annotated with a green number:

- 1**: A text input field for 'Team Title'.
- 2**: A text input field for 'URL'.
- 3**: A checkbox labeled 'Open URL in a New Window'.
- 4**: A text input field for 'Amount' preceded by a '\$' symbol.
- 5**: A 'Remove' button.
- 6**: An 'Add another item' button.

Below the 'Amount' field, there is a note: 'The link title is limited to 128 characters maximum.' and examples: '*123456*', '*123,456*', '*123456.99*', '*123,456.99*'. A blue 'Save' button is located at the bottom left of the form.

- Annotate
- Break down page with screenshots
- Group by task
- Build in HTML

End User Manuals (End User and Site Admin)?

Posted by  on January 30, 2004 at 4:40am

We have one client that is live now and have been so impressed with Drupal as a portal/CMS framework that we intend to start actively pushing it primarily for schools/alumni associations but also as an intranet/CMS for SMEs. Has anyone created an end user and a site admin manual yet? For end users, something that explains how to post the various standard types of content, moderation, etc. For site admins, how to manage taxonomies, permissions, registration, etc.

On Drupal, I have been able to find answers to all of my questions but the answers were scattered between forums and documentation. If a consolidated manual has not yet been written (one for end users and one for site admins), I will write one and would be happy to contribute it back to Drupal.

Cheers,

End User Manual

 commented 6 years ago

Did this ever get done?

Easy Labels

5

- don't force system jargon on your editors
- action oriented labels
- thinking beyond the 'machine name'

Please add this ‘module’!

I really want to add a video module to my new landing page for the release of the new legislative rollout - explaining how citizens can access new services.

- Deputy Director

User Story / Example

A man with a beard, wearing a red and blue checkered shirt, is pointing at a computer monitor. A woman with long brown hair, wearing a blue top, is looking at the monitor. They are in an office setting with other people and desks in the background.

“As a site moderator, I want a content filtering dashboard, so that I can easily locate the content I need to moderate.”

Platform Power

Dashboard & Rethinking Experience

There's a Module for That...

Make content creation screens shine...

- **Conditional Fields** - aka *magic forms*
https://www.drupal.org/project/conditional_fields
- **Field Groups** - aka *like goes with like*
https://www.drupal.org/project/field_group
- **Label Help** - aka *helpful help text*
https://www.drupal.org/project/label_help

(via Eileen Web aka @webmeadow)

Bulk Ops are Tops!

Views is a very powerful content list builder but it can also be used as a tool for building out custom search or adminable screens for editors who need to do specific actions to content.

VBO or Views -

https://www.drupal.org/project/views_bulk_operations

Give your admins a special theme

- Adminimal theme
https://www.drupal.org/project/adminimal_theme
- Ember
<https://www.drupal.org/project/ember>

Distributions

- Spark - <https://www.drupal.org/project/spark>
 - focuses on UX & admin backports
- Panopoly - <https://www.drupal.org/project/panopoly>
 - packages features WYSIWIG & layouts

Drupal Dreams - 8!

Drupal 8

- Major UX initiative for the administration experience
- Brings in a lot of learnings & long term feedback from Drupal 'end users'
- Views in core
- Multi-lingual complete rethinking
- Configuration management
